

pandas series & data frame in Python in 10 simple tasks only the document file

Here is a document-ready list of 10 simple tasks on Pandas Series and DataFrame in Python. Pandas Series is a one-dimensional labeled object, and DataFrame is a two-dimensional table-like structure.^[1] ^[2]

10 Simple Tasks

1. Create a Series from a list.^[3] ^[1]
2. Create a Series from a dictionary.^[1]
3. Create a DataFrame from a dictionary of lists.^[2] ^[1]
4. Display the first 5 rows of a DataFrame using `head()`.^[2]
5. Show basic information about a DataFrame using `info()`.^[2]
6. Select one column from a DataFrame.^[2]
7. Select multiple columns from a DataFrame.^[2]
8. Add a new column to a DataFrame.^[4]
9. Sort a DataFrame by a column using `sort_values()`.^[4]
10. Check missing values using `isnull()`.^[4]

Simple Examples

```
import pandas as pd

# 1. Create a Series from a list
s1 = pd.Series([10, 20, 30, 40])
print(s1)

# 2. Create a Series from a dictionary
s2 = pd.Series({"A": 100, "B": 200, "C": 300})
print(s2)

# 3. Create a DataFrame from a dictionary of lists
df = pd.DataFrame({
    "Name": ["John", "Alice", "Bob"],
    "Age": [25, 30, 35],
    "City": ["Chennai", "Delhi", "Mumbai"]
})
print(df)
```

```
# 4. First 5 rows
print(df.head())

# 5. Basic info
print(df.info())

# 6. Select one column
print(df["Name"])

# 7. Select multiple columns
print(df[["Name", "City"]])

# 8. Add a new column
df["Marks"] = [85, 90, 95]
print(df)

# 9. Sort by Age
print(df.sort_values("Age"))

# 10. Missing values check
print(df.isnull())
```

Document Title Suggestion

Pandas Series and DataFrame: 10 Simple Tasks in Python^[1] ^[2]

Would you like this converted into a Word-style assignment format with headings, aim, code, and output?
